## Vacuum and Rebed Services

AC Chemicals, LLC offers vacuum and rebed services anywhere in the Gulf Coast or South East US. We have trucks pulling vacuum units and crews available to travel to any jobsite and vacuum out the spent carbon, spent mole sieve, spent alumina, or spent silica gel from any vessel at a customers site. We can either dispose of the spent material or leave it for the customer to dispose of. For spent carbon we can have that reactivated at an approved carbon reactivation facility and provide the customer with a certificate of reactivation. In order for AC Chemicals to quote you we need to know the following about your particular project:

- Loading Diagram showing what is loaded in each vessel is very helpful
- ID of vessel(s), seam to seam height of vessel(s)
- Manway sizes on each vessel
- Address of facility
